LETTER OF TRANSMITTAL.

THE PANAMA CANAL, DEPARTMENT OF HEALTH, Ancon, Canal Zone, July 11, 1914.

GOVERNOR OF THE PANAMA CANAL, Culebra, Canal Zone.

Str: I have the honor to submit the following report of the operations of the department of health for the month of June, 1914.

Very respectfully, .

CHAS. F. MASON, Chief Health Officer.

GENERAL REMARKS.

The diminishing death rate in the Canal Zone and the increasing death rate in the city of Panama, which has been noted for some time past, is believed to be due largely to a shifting of population from the Canal Zone to Panama. The census which is now being taken will settle this point.

The large increase in the running expenses for the month is due to the payment of accrued leave.

DIVISION OF HOSPITALS.

Employees.

The health of the employees has continued good during the month. No cases of yellow fever, smallpox, or plague originated on or were brought to the Isthmus during the month. The number of names on the rolls for the preceding month was 47,579.

The total number of admissions to hospitals and quarters was 1,511, or a rate of 381.09 per thousand per annum, as compared with 407.92 for the preceding month, and 472.50 for the corresponding month of last year.

The total number of deaths from all causes was 20. Of these 13 died from disease, or 3.28 per thousand per annum, as compared with 5.74 for the preceding month, and 3.27 for the corresponding month of last year. The diseases causing the largest number of deaths were as follows: Lobar pneumonia, 2; organic disease of heart, 2; tuberculosis, 2. No other disease caused more than one death.

The number of employees per thousand constantly sick was 11.69, compared with 11.65 for the preceding month, and 14.98 for the corresponding month of last year.

The disease causing the highest admission and noneffective rates in hospitals was malaria, or 62 per thousand per annum, and 1.62 per thousand, respectively. The corresponding admission rate for last month and the same month of last year was 50 and 49; 27 per cent of all admissions were due to this cause.

The next highest admission rates were for venereal diseases, diseases of the digestive system, and diseases of the respiratory system. These four classes of diseases caused 51 per cent of all admissions.

The admission rate for typhoid fever per thousand per annum was 0.00, compared with 0.75 for the preceding month, and 0.00 for the corresponding period of last year.

EFFECTS OF RACE.

The admission rate to hospitals and death rate for disease for black employees were 139.79 and 3.67 per thousand per annum, as compared with 350.66 and 1.43 for white employees. The noneffective rate for disease and injuries for black employees per thousand was 10.20, as compared with 18.67 for white employees.

The admission rate to hospitals for malaria was 53.23 per thousand per annum for blacks as compared with 103.47 for whites.

DEPORTATIONS.

There were 12 deportations accomplished during the month, divided as follows: Employees, 7; nonemployees, 5; for disease, 11; and injury, 1.

CANAL ZONE.

The number of persons, white and colored, living in the Canal Zone, is estimated at 54,655, among whom there were 44 deaths; of these 42 deaths were from disease, a rate of 9.22 per thousand per annum, as compared with 12.93 for the preceding month, and 12.39 for the corresponding month of last year. Of the total deaths from disease the percentage under 5 years of age was 33, compared with 42 last month.

PANAMA CITY.

In Panama City with an estimated population of 47,172, there were 156 deaths; of these 150 deaths were from disease, a rate of 38.16 per thousand per annum, as compared with 32.56 for the preceding month, and 30.02 for the corresponding month of last year. Of the total deaths from disease the percentage under 5 years of age was 55, compared with 52 last month.

COLON.

In Colon, with an estimated population of 20,232, there were 48 deaths; of these 44 deaths were from disease, a rate of 26.10 per thousand per annum, as compared with 30.25 for the preceding month, and 21.34 for the corresponding month of last year. Of the total deaths from disease the percentage under 5 years of age was 36, compared with 31 last month.

SANITATION.

CANAL ZONE.

The malaria rate for employees in June was about the same as for last year, which, in turn, was lower than any preceding year.

Extensive breeding areas for Anopheles still exist in the hydraulic fills between Ancon, Balboa, and Corozal, and another will doubtless exist on the fill now started back of the San Miguel district of Panama.

There was but one case of typhoid reported in June. A known typhoid carrier eloped from Ancon Hospital during the month and his whereabouts is still unknown.

The scheme for bringing malaria carriers under treatment has not been abandoned, but little progress has been made during the month.

Much cleaning has been done in the negro towns, especially those in Empire district, with the result that they look and are in better condition.

Detailed statistics are shown in Table XVII.

PANAMA.

There has been a marked improvement in the general cleanliness of the city. This is apparent in the condition of the streets, alleys, and patios, and the considerable abatement in the fly nuisances.

GARBAGE COLLECTION.

The collection and disposal of garbage was satisfactorily carried on during the month. Ninety per cent of all garbage collected in the city is now cremated at dump No. 2. Extra labor was placed on this dump in order that it might be accessible during the heavy rain. A pump for spraying larvacide will be placed on this dump during July for the purpose of killing adult flies. Very little fly breeding was found at the dump, but the numerous flies present are accounted for by adjacent fly-breeding areas, which were not discovered. The work of installing self-closing covers for garbage cans was advanced during the month.

BUILDING INSPECTION.

Since April 1st of the present year, this office has issued 513 permits for repairs to buildings. A check of the work on June 30th shows that 25.53 per cent of the work called for on the permits had been completed, and that on 90 per cent of the outstanding permits the work was in different stages of progress.

Of the 16 buildings shown in the report as having been demolished 15 of this number were demolished by the owners of the said buildings; only one was demolished by this office, and that was at the request of the owner.

The number of buildings inspected as shown in the report was considerably less than the number reported for the month of May; this is due, in part, to the requirements of the office that careful inspection of entire buildings be made by the inspectors for concealed containers holding water, it having been found that in several instances occupants of houses were collecting water from the roofs and storing it in their rooms with the result that several complaints were received as to the presence of mosquitos in and about buildings. A careful search of the exterior of the premises showed no mosquito-breeding places, but an inspection of the interior of the building adjacent, from which the complaint came, revealed several buckets of water in which Stegomyia breeding was found.

In inspecting the buildings, instructions have been issued that every house in each inspector's district should be carefully inspected at the same hour of the same day of each week.

VACCINATIONS.

During the month there were 1,779 vaccinations performed. No infections have been found or reported among those vaccinated.

CONTAGIOUS DISEASES.

Two cases of diphtheria were reported during the month. Patients were isolated as soon as found and immediate contacts given prophylactic doses of antitoxine. No other contagious diseases were found or reported during the month. No typhoid fever found or reported in the city of Panama.

MOSQUITO, RAT, AND FLY WORK.

The routine maintenance of ditches was carried on during the month, and the number of mosquito-breeding places found shows a slight decrease over the previous month. There was an increase in the number of fly-breeding places found, there being 1,336 for June as against 1,110 for May. The fly-breeding places are treated with a strong solution of larvacide, which is very effective in killing fly larvae at any stage. Nine hundred and nineteen rats were trapped and sent to the laboratory. These rats came from all parts of the city. Examination of these rats has been reported as negative. Drip barrels of oil have been placed over earth drains in the different districts where needed.

SCORE CARDS.

. The score card system was applied to hotels, bottling works, and bakeries, and the average scores obtained by the above places were as follows:

	spection	Last in- spection average.
Hotels	51	84
Bottling works	52	77
Bakeries	53	56

The bakeries which show the lowest average score on the final inspection of the month are the most difficult public establishments to control, principally for the reason that most bakeries in the city are conducted on the community plan. Ovens used are nearly all of the stone type and are not equipped with chimneys. There is only one opening to the oven, and in this opening the wood for heating the oven is fired and later withdrawn, when the dough is set in to bake. The walls of the bakery under this system are always covered with a thick layer of soot as well as the baking pans, tables, and other utensils used. The building in which the oven is located is usually owned by one person, while another person owns the oven, and he in turn rents the use of it by the day to the different venders of bread. It is proposed to condemn bakeries of the above type and to require the installation of modern machinery.

Detailed statistics are shown in Table XVII.

Colon."

Conditions in Colon have been good during the month. The following special work has been accomplished:

Installation of garbage cans on the piers at Cristobal for the use of ships lying at the docks, that have hitherto been throwing their garbage in the harbor.

Removal of rat-infested shacks at Folks River and the elevation of the charcoal on platforms 3 feet above the ground.

VACCINATION.

Adults examined	380
Adults vaccinated	175
Children examined	700
Children vaccinated	465

Detailed statistics are shown in Table XVII.

QUARANTINE SERVICE.

No disease of a quarantinable nature has been received at any of the stations during the month. The plague situation in South America remains about the same.

The plague situation at Habana, Cuba, appears to show no material change, but a recent report indicates that a case of this disease has occurred at Santiago, Cuba. Antiplague precautions are now being taken with ships from all Cuban ports.

Detailed statistics are shown in Table XVIII.

ANCON HOSPITAL.

There has been a slight falling off in the admission and noneffective rates in the hospital during the month.

BOARD OF HEALTH LABORATORY.

Dr. Darling, chief of laboratory, who was in Colombia last month investigating an alleged outbreak of pneumonic plague, has returned and made his report showing that the disease investigated was not plague but ordinary lobar pneumonia.

55821-14-2

The following work, in addition to the routine, was performed by the board of health laboratory during the month of June, 1914: Bionomics of ticks *Dermacentor nitens*, the tropical horse tick, and the probable transmitter of piroplasmosis.

Breeding out moths (probable plant pests).

Bionomics of Stegomyia scutelarias.

Bionomics of water boatmen, particularly with reference to whether they prey upon mosquito larvæ.

Determination of the susceptibility of sloth and deer to Tr. hippicum. Observations of *Endotrypanum schaudinni* of the sloth. Collection of pathological data on syphilitic aortitis.

A study of the deteriorating effect of certain constituents of theatmosphere upon larvacide.

Examination of the nonvolatile constituents of crude carbolic acid and the relation of these substances to the complete emulsification of the crude carbolic acid with resin soap.

An attempt to determine the slight amount of acid substances occurring in some hydrocarbon lubricating oils.

FARM FOR THE DISABLED.

The produce of the farm for the month amounted to \$471.46. The net per capita cost was $$0.95_{\star}$ as compared with \$0.26 for the preceding month. In addition to routine work the following fruit trees were set out: Seven hundred coconut, 225 avocado pears, 200 papayas.

INSANE DEPARTMENT AT FARM.

Ten additional males were transferred to Corozal on the 20th of the month, bringing the total number of insane employed there up to 40.

The therapeutic advantages already obtained by these patients by being afforded pleasant occupations in the open air at the Corozal Farm is encouraging, as several of them who were previously incorrigible, noisy, and destructive on occasions have become steady workers, agreeable, cheerful, quiet, and tractable.

From time to time it is planned to increase gradually the insane working force at that place with other patients from the asylum, in order that they, too, may be benefitted by healthful and attractive employment and diversion, which is being recognized as an important factor in the curative treatment of the insane in the more modern psychiatric institutions throughout the world.

Detailed hospital statistics are shown in Table XIII.

COLON HOSPITAL.

The condition in this hospital has remained about the same as last month.

CHRONIC DEPARTMENT.

There were 27 chronic and incurable patients constantly cared for during the month.

Detailed hospital statistics are found in Table XIV.

PALO SECO LEPER ASYLUM.

The number of patients under treatment at the end of the month was 49, the same as for the previous month. Detailed statistics are shown in Table XV.

Detailed statistics are shown in Table XV.

SANTO TOMAS HOSPITAL.

During the month a total of 1,222 cases were treated in the wards, showing a slight increase over the preceding month. The number of hospital days total 11,058, with a decrease from the preceding month of 165. The daily average of patients for June was 368 as compared with 360 for the month of May. The subsistence cost remains approximately the same as for the preceding months, viz, 23 cents per day, while the per capita cost for the month was \$0.833 per day.

Deaths for the month of June totaled 63, an increase of 3 over the month of May while the births were 87, a decrease of 3.

Malaria was the predominant discuse treated, the rate being considerably lower than for the month of May. As compared with the total number of admissions for malaria, but few patients are admitted from the city itself, most of the malaria coming from the suburbs of Panama, the Guachapali and Calidonia sections, and along the Sabanas road and the vicinity of old Panama.

Pneumonia has been prevalent during the month and 7 deaths have resulted from this disease, out of a total of 26 cases treated. Nephritis was the cause of death of 12 patients; pulmonary tuberculosis of 6.

But 1 case of typhoid fever was treated during the month, and 1 each of leprosy, scarlet fever, and diphtheria. No other contagious diseases were treated.

Detailed statistics are shown in Table XVI.

DISTRICT DISPENSARIES.

The district having the largest admission rate for malaria was Corozal with an average weekly percentage of 0.58; that having the lowest admission rate for malaria was Empire, with a percentage of 0.18.

Detailed statistics are shown in Table IX.

The following is a summary of sanitary work performed and material expended during the month in the Canal Zone: Work requests on Quartermaster's Department

work requests on Quartermaster's Department:	
Grass cutting	21
Screening.	18
Miscellaneous	20
Work requests on engineering department	33
Work requests on other departments.	4
Notices served to abate nuisances	4
Building permits approved	1
Inspections of closets	2,450
Inspection of stores	223
Inspections of restaurants	37
Inspections of shops	181
Garbage cans emptied	140,374
Closets disinfected	6,484
Houses disinfected	3
Rat traps used daily	1,289
Adult Anopheles destroyed in houses	8,166
Adult culices destroyed in houses	18.843
Containers found with Stegomyia larvæ	20
Larvacide used	3,705
Crude oil useddo	23,915
Rats destroyed	. 1,195

SUMMARY OF ROUTINE WORK DONE BY THE HEALTH OFFICE, PANAMA.

Mosquito work:	
Lineal feet of ditches cleaned and maintained.	26,831
Number of cubic varus earth used in hilling	0
Gallons larvicide used	7391
Gallons crude oil used	145
Square yards pools oiled	60,859
Water containers treated	176.279
Mosquito-breeding places found	1,185
Fly-breeding places found	1,336
Garbage collections:	-,
Loads garbage removed to dump	4,560
Total cans garbage emptied	99,550
Buildings:	,
Buildings inspected	5,634
Plans for new buildings approved	51
Permits granted for repairs to old buildings.	155
Buildings condemned	186
Buildings demolished.	° 16
Street cleaning:	
Average number of square yards cleaned daily	600,000
Average number of square yards streets sprinkled daily	90,000
Private properties cleaned during month.	6
Notices served and nuisances abated.	183
Vaccinations:	
Vaccinations during month.	1,779
Total vaccinations since Apr. 1, 1914.	4,844
Louis accountered ballot sept. 1, 1011	.,011

GENERAL WORK REPORT FOR COLON.

[Including Cristobal, Mount Hope, and Toro Point.]

HEALTH OFFICE, Cristobal.

HEALTH OFFICE, Cr	istobal.
General sanitation:	
Square yards of street cleaned Square yards of street sprinkled	4,045,752
Square yards of street sprinkled	0
Square vards of alleys maintained	701,807
Loads of garbage, cubic vards	463
Private properties cleaned	80
Rats killed	163
Cans of garbage (1.085 cubic yards)	64,226
Cubic yards of ditches constructed.	134
Linear feet of ditches maintaine d	4,055
Cubic yards of ditches constructed. Linear feet of ditches maintained. Square yards of vegetation removed.	76,000
Square vards oiled	41,700
Receptacles treated.	22, 900 136
Receptacles treated. Mosquito-breeding places destroyed.	136
Fly-breeding places destroyed	67
Billidings inspected	2,835
Gallons larvicide used	840
Gallons crude oil used	0
Nuisances abated.	219
Colon dump maintained	
Buildings:	*.
Plans approved	2
Permits to repair issued.	34
Permits to occupy issued	3
Temporary permits to occupy issued	0
Sewers (reported by division of municipal engineers):	
New connections made during month	3
New connections made during month	1,148
Houses in which extensions were made	1
